Hardscape Ideas

by EAGLE BAY

EAGLE BAY®

Build a BEAUTIFUL FUTURE.

Welcome to Eagle Bay

Innovative solutions. Quality products. Beautiful results. That's the promise of Eagle Bay. Focused on delivering a comprehensive, integrated line of products to fit a variety of design challenges, Eagle Bay is a leader in hardscaping materials.

In this catalog, you'll find reliable products you may already be familiar with, and new materials that are innovative to the landscaping industry. Some products are even environmentally friendly to work with today's water management and soil erosion concerns.

Throughout these pages, you'll see inspiring ideas and applications that will move you to create your own special design. Whether you are a homeowner looking to build a raised patio in the backyard or a developer in need of a retaining wall to support a building pad, Eagle Bay has the products and expertise you need. And, as always, we stand behind our product 100%. If you need us for any reason, we'll be on site within 24 hours. GUARANTEED.

Make your surroundings even more beautiful with natural and manufactured materials that complement every type of structure. Come and experience Eagle Bay.

ANCHOR™
BUILD SOMETHING BEAUTIFUL

On our cover: GrandCay pavers in a Cobbled finish and Pamlico Range color give this elegant driveway an Old World charm. The border is in the Chesapeake Range color. See page 20 for this product.
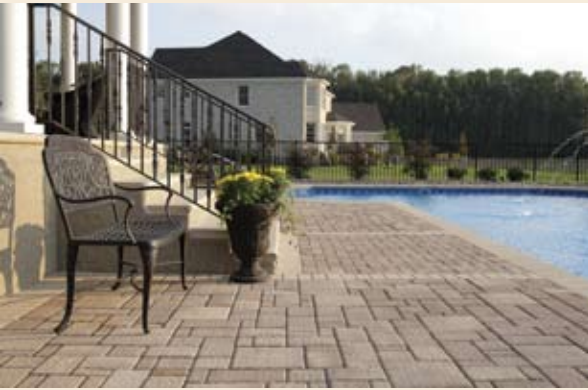

PAVERS

When you want to add style and substance to a patio, walkway, pool surround, or driveway, Eagle Bay Pavers are a great way to get the look you want. Choose from a variety of patterns, finishes, and colors, then let your imagination take you from there.

BRIKSTONE

Surround yourself with the comfort of timeless tradition

Achieve a feeling of serenity and peace with the symmetrical look of BrikStone.

With the design and feel of traditional brick, these pavers can bring a sense of

order to patios, driveways, pools, and paths. Choose the color and pattern that

fits the mood you want to create and watch your landscape come alive.

OPPOSITE: This driveway uses Brikstone pavers in the James River Range color with a Chamfered finish.

Design Tip

Adding a path, walkway, or small wall helps guide people to their destination. If the mood calls for a calming, relaxing setting, then quiet colors, smooth textures, and a curved design will do the trick.

When you want to keep people moving in public spaces, straight lines and patterns suggest forward movement.

WALKWAYS COME ALIVE

BrikStone makes an elegant yet traditional entrance to any home. Using two contrasting colors creates a dynamic pattern that can create a lasting first impression and accentuate surrounding plantings.

PAGE 6 **Top Left** Finish: Antiqued; Color: Kanawha Range

BRIKSTONE

PATIO PERFECTION

Keep patios interesting with a herringbone pattern of BrikStone. The chamfered finish with beveled edge is perfect for an even walking surface that still adds texture to your hardscaping.

CottageStone

Slip into the warmth of a well-loved retreat

Inviting and comfortable. Warm and relaxing. That's the look and feel
you'll achieve with CottageStone. Available in four distinct sizes, these pavers
fit together to make an eye-pleasing arrangement whether you're building
a garden path, a bungalow walkway, or casual outdoor area.

OPPOSITE: An interesting "I" pattern using 6" x 6" and 6" x 9" pavers; all in James River Range with a
Cobbled finish. This is complemented by our Highland Stone Freestanding Wall in Blue Ridge Range color.

Design Tip

Placement of stones can change your look. When used horizontally, pavers can elongate the look of a walkway or make a small space look larger.

When used vertically, pavers can make a long walk look accessible or make a large space more inviting.

CREATIVE OPTIONS

When you're looking for a softer, natural look, CottageStone does the trick. It works well with both large expanses and small intimate spaces to give a professional touch to your landscaping.

NATURALLY BEAUTIFUL

When you combine CottageStone with other Eagle Bay pavers, you can design an exciting combination that adds beauty and value to the property.

KINGSLAND

Design driveways, paths, and patios with this elegant choice

Adding texture and shape to your outdoor living areas

results in a rich, elegant look. The traditional look of KingsLand

pavers lets you use your imagination to create a place where

timeless beauty mixes with durability.

OPPOSITE: This beautiful pathway, with a wet look sealant, uses
KingsLand pavers in the Traditional finish and Pamlico Range color.

Design Tip

Take into account the colors of the bricks or siding of a residence or building when choosing colors for pavers and walls.

Matching the original materials creates a more harmonious look while using contrasting colors can create dynamic curb appeal. Consider mixing finishes as well to give a more custom look.

FINISHES

ANTIQUED	Flat face, distressed face and edges.
TRADITIONAL	Very slight dimpling, rounded edge.
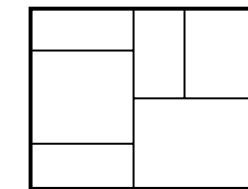

EPICSTONE

Make a big, bold, beautiful statement with this stone's unique hand-finished look

Like the strong, silent type in an epic war movie, you can always count on this paver for areas that carry a lot of weight. EpicStone is the right choice for driveways, walks, and patios where you want a feeling of scale and importance. And the wide range of colors allows you to coordinate both landscape and building to create a pleasing, cohesive design.

OPPOSITE: This riverside patio was created with EpicStone pavers in Pamlico Range with a Cobbled finish.

EXPECT THE UNEXPECTED

Pavers don't have to be boring, and EpicStone is proof. With a dimpled face and distressed face and edges, this paver is bold and unexpected. Its strength and durability make it the stone of choice for a powerful statement on a walkway, patio, or driveway.

Design Tip

Carefully look at the landscape during the planning and design phase. Are there lots of bushes and trees? Or is it out in the open? Is the area prone to wetness?

Knowing and understanding the environment is key to a successful hardscape installation.

GrandCay

Random patterns and textured finishes create a look of understated elegance

Hit a new level of sophistication with GrandCay. From dimpled to distressed, this paver brings both style and snap to poolsides, patios, walkways, and more. The five-piece modular system allows your sense of fashion to take flight in colors ranging from warm Crimson to cool Blue Ridge.

OPPOSITE: GrandCay pavers in a Cobbled finish and Pamlico Range color give this elegant driveway an Old World charm. The border is in the Chesapeake Range color.

TRY TEXTURE

GrandCay offers a dimpled face that adds dimension and depth to a patio or walkway.

Design Tip

Patios can be used for many different activities, including dining, recreation, and quiet time. To make the right statement for your patio, consider the site, style, and materials.

If you want an intimate feeling for a conversation area, smaller stones might do the trick. A bolder statement for a more expansive space can be achieved with larger stones and contrasting colors. Adding steps and patterns put a crowning touch to the design.

CIRCLESTONE

Use soft edges and curves for an intimate, personal look

From the edge of a seashell to the canopy of a tree, curves reflect nature

at its best. CircleStone pavers allow you to bring the softness of nature

into your own world. Try a pattern at the end of a walk, or enhance

a patio with a focal point. Any way you choose to use it, you'll find our

CircleStone kit makes it easy to create a personalized look.

OPPOSITE: This poolside retreat uses CircleStone pavers in the Sahara color with an Antiqued finish.
This is framed by a GrandCay deck in James River Range color with a Textured finish.

DESIGN WITH IMAGINATION

A classic labyrinth pattern with Eagle Bay's CircleStone can be used to create a peaceful, meditative pattern that invites discussion and contemplation. Or create a focus on a patio, pool area, or driveway with multiple circles.

Design Tip

When confronted with a large area, try breaking it up into smaller sections. For example, make one area for informal seating and conversation, while another can be reserved for grilling and food preparation.

Color, texture, and size can help indicate purpose and transitions of the areas.

PAGE 26 **Top Left** Finish: Antiqued; Color: Sahara **Bottom Left** Finish: Cobbled; Color: Buff **Middle Right** Finish: Antiqued; Color: Sahara

CopingStone

Add the right finishing touches for a complete, sophisticated appearance

Whether you're designing a pool edge, seating wall, or stairway,

you need a finishing touch that lends both style and safety.

CopingStone pavers feature a smooth, "bull-nose" edge that gives a

sophisticated look while softening sharp angles. And with a range of colors,

you can add matching or contrasting details for a rich look.

OPPOSITE: CopingStone in the Pamlico Range color is the perfect frame for this pool setting.

LIFE ON THE EDGE

Adding Eagle Bay CopingStone to your landscaping gives a final polish to your design. Each one has a "bull-nose" that offers a practical solution to sharp edges and rough corners. Plus a variety of colors mean you can match almost any of our pavers.

SMOOTH AND EASY

Rounded for a soft edge and practical use, coping stones are not only for stairs and seating areas. Think out of the box and construct a custom fire pit or surround a hot tub. These specialty stones add both beauty and practicality to every hardscape design.

PAGE 30 **Top Left** Color: Pamlico Range **Middle Left** Color: James River Range **Middle Right** Color: Blue Ridge Range **Bottom Right** Color: James River Range

PAGE 31 **Top Left** Color: Sahara **Top Right** Color: Pamlico Range **Bottom Left** Color: Sahara

Design Tip

When working with a pool area, keep in mind that you should reflect the nature and shape of the pool, as well as how the space will be used. Hardscaping should help to anchor the area and make a transition from the home to the pool.

Permeable Pavement

Protect the environment around you and look good doing it

Need a way to channel water, control runoff, and deal with roadway contaminants? These permeable pavers enable you to protect your environment while allowing areas such as parking lots, driveways, and low-speed roads to keep within your design aesthetic.

OPPOSITE: This driveway uses SF Rima™ pavers in Buff color with a Textured finish.

SF RIMA™

Need a new way to manage water? Try this permeable paver from Eagle Bay. Used correctly, our SF Rima™ paver will help control water runoff, decrease the impenetrable surface area of parking lots and driveways, refresh the aquifer, and ecologically manage roadway contaminants such as oil and antifreeze. In addition, SF Rima™ is a durable paver that can withstand heavy traffic, so it is an excellent choice for large commercial and industrial projects.

PERMEABLE PAVEMENT

PERMEABLE PAVEMENT

TURFSTONE

Turfstone pavers are a high-tech paver designed for environmentally sensitive areas. These pavers allow rainwater to filter through in a slow, even way, resulting in the control and stabilization of soil erosion. And because the unique design allows greenery to grow through the paver, this product works well in areas where the look of nature needs to be preserved.

SPECIFICATIONS

	TurfStone

protect NATURAL RESOURCES
on EVERY FRONT

*Green*SCAPES
by EAGLE BAY

Eagle Bay Hardscape Products is protecting our natural resources on a variety of fronts: shoreline erosion control, stormwater management, tree-saving wall solutions, organic paver sand, and wall structures that reduce excavation.

KEEP SHORELINE EROSION AT BAY

After

During Construction

Unprotected waterfront property erodes away at an average rate of about 2.5 feet annually.* Not only is valuable property lost, but water quality is also affected when erosion occurs. To make sure that erosion is kept to a minimum, use Eagle Bay's Anchor™ segmental retaining wall systems.

These wall systems offer a durable, functional, and aesthetically pleasing solution to shoreline erosion. As engineered, the dry-stacked retaining wall allows water to penetrate a specially constructed reinforced zone behind the wall. The water then drains out slowly, leaving the shoreline strong and in place.

MANAGE STORMWATER WITH EASE

Stormwater flowing off asphalt or concrete carries with it contaminants: oil, antifreeze, metal particulates and dirt. Gushing down a storm sewer, this leads to stream bank erosion and downstream flooding, as well as pollution.

To battle this, Eagle Bay offers several products that can help builders work with stormwater effectively. SF-Rima™, Turfstone and VS-5™ Eco are all products that have permeability and can deal with water effectively.

LANDMARK® SYSTEM
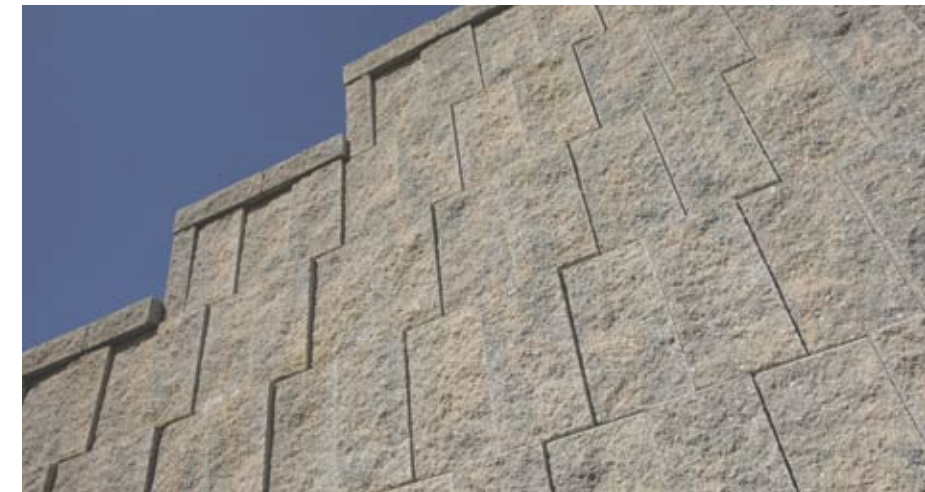

The Landmark® system can be attached directly to soil nails or rock bolts, eliminating extensive excavation. This feature also saves trees that would have been removed in the excavation.

USE STABILIZED AGGREGATE FOR AN UNCONVENTIONAL SOLUTION

If there isn't enough space to construct a conventional retaining wall with geo-synthetic reinforcement or if poor in-fill soils are your challenge, stabilized aggregate can be an effective option.

A cost-effective, non-conventional retaining wall option, building with stabilized aggregate offers unique solutions to difficult site problems. Excavating costs can be dramatically reduced and excavation depth can be minimized to preserve property.

FILL PAVER JOINTS WITH ENVIROBOND™

Faced with the challenge of filling joints and voids, installers rely on Envirobond™ to solve this problem with an environmental solution. This company has revolutionized the hardscaping industry by introducing a line of organically stabilized joint sand and stone. Materials from Envirobond™ reduce erosion and maintenance, making this product a smart choice. Eagle Bay is proud to be an Envirobond™ dealer and distributor.

Cradle to Cradle℠ Products

The Cradle to Cradle℠ designation means that companies use environmentally safe and healthy materials in their design. These can include material reutilization, such as recycling or composting; the use of renewable energy and energy efficiency; efficient use of water; or maximum water quality associated with the design and production. Eagle Bay offers several products that have this impressive designation.

CERTIFIED
cradletocradle

Get Your LEED® Certification

Did you know that the U.S. Green Building Council (USGBC) endorses Cradle to Cradle Certified℠ products in their LEED (Leadership in Energy and Environmental Design) Certification criteria? You can even earn a LEED Innovation Point for projects using a percentage of Cradle to Cradle Certified℠ products.

Design Tip

When you're working with a sloping yard or an irregular shape, using a tiered design can help. Each tier can have its own personality, so one section can work as an eating area where another can be set up for conversation and quiet time.

VERSATILITY REIGNS

If you're searching for a block that grants you versatility in your design, Diamond® retaining walls give you what you're looking for. Available in both straight and beveled, these blocks let you create with ease.

FLEXIBILITY COUNTS

Adding curves to a wall with Diamond® block can give a designer look to a large space. The patented rear-lip feature along with the tapered nature makes working with curves and tiered structures simpler than ever before.

Landmark® System

The transportation industry has high standards when it comes

to retaining walls and block. Made for strength and durability,

the Landmark® system meets every one of them.

Vertica®

RETAINING WALLS

If your project calls for a tall wall or a large-scale expanse, look to

Vertica® retaining walls. Made in earth tones of strong, durable material,

this stone will complement your project while holding up for years to come.

OPPOSITE: This state highway is bordered by a Landmark® wall in the Blue Ridge Range color.

INSTALLATION GUIDE

PAVER: *How to install a patio using concrete pavers*

IF YOU WANT TO EXPAND YOUR INDOOR ROOMS TO THE GREAT OUTDOORS – where you can enjoy space to dine, entertain or just relax, consider installing a patio. Anyone can install a patio, but because there is lifting, hauling, digging and cutting involved, it is important to wear work gloves, knee pads, a back support belt, safety glasses and ear plugs as well as to practice proper lifting techniques.

MIN. LENGTH EQUAL TO BASE THICKNESS
PLASTIC EDGE RESTRAINT
CONCRETE PAVER
2 ³/₈" (60 MM) MIN THICKNESS
1" TO 1 ¹/₂" (25 TO 40 MM) BEDDING SAND
COMPACTED AGGREGATE BASE
GEOTEXTILE AS REQUIRED
TURN UP AT SIDES OF BASE
VARIES
COMPACTED SOIL SUBGRADE
STAKE

NOTE: THICKNESS OF AGGREGATE BASE WILL VARY WITH SUBGRADE CONDITIONS AND CLIMATE. COLDER CLIMATES MAY REQUIRE THICKER BASES.

DESIGNING AND INSTALLING YOUR OWN PATIO CAN BE COMPLETED IN FOUR STEPS:

- Paver Selection
- Site Analysis And Preparation
- Project Estimation
- Layout And Installation

1 Determine the area to be paved and how much material will be needed. Choose paver shape and pattern. Estimate quantity for paved area.

2 Have utilities marked and excavate area to be paved. The heavier the surface load, the deeper the base excavation. Be sure you have plans for relocating the soil and sod. Compact exposed base area.

3 Install geotextile and base aggregates. Turn cloth up at sides of base. Place aggregates over cloth to required depth and compact to 95% solid. Set posts and stringlines for final base grades and finished paver elevations.

4 Install C-33 concrete bedding sand and screed smooth for setting pavers to finished elevation. Allow ¹/₄" high for paver settling during placement.

5 Place pavers on screeded sand setting bed. Use stringlines to keep pattern straight. Set hand-tight joints. Cut pavers in areas as needed to complete pattern.

6 Set plastic edging tight against all exposed paver edges and spike firmly every 24" for walkways and 12" for driveways and curves. Edging works best if set on aggregate base after trimming sand setting bed flush with outside edge of pavers.

7 Sweep dry C-33 concrete sand or other selected joint material into all joints and compact to complete interlock process. Refill to desired level after early weathering. Sweep up, clean up and enjoy your new paver installation.

For more detailed instructions, you may want to review patio-installation instructions online, in home-improvement books or in brochures at sand and gravel yards. Once you have your materials and tools ready, you can begin your project.
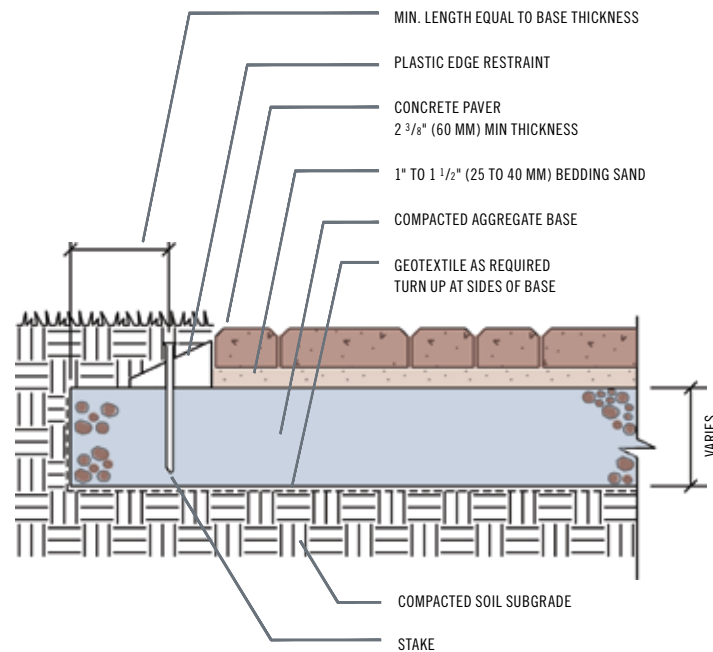

WALL: *How to install a retaining wall*

QUICK COURSE ON COURSES. To complete your project, you will need the following hand tools: shovel, tape measure, hammer, chisel, carpenter's level, stakes, string line, garden hose, safety glasses, gloves, pencil, square. You may also need a skid loader, compactor, wheelbarrow and a circular cut-off saw with a masonry blade. Other requirements include a 4" diameter flexible polypropylene pipe (drain tile), a supply of sand and gravel (³/₄" or smaller aggregate with fines) for the base, and gravel (³/₄" free-draining aggregate without fines) to use as backfill.

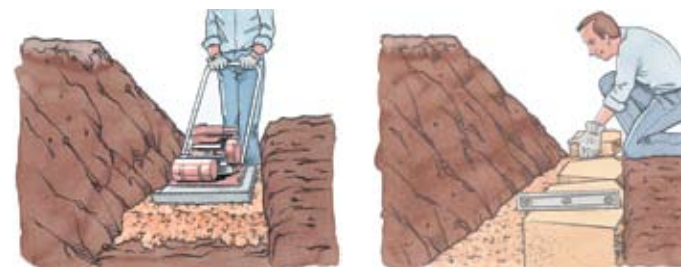

FIGURE A   FIGURE B

FIGURE C   FIGURE D

FIGURE E   FIGURE F

1 Using a shovel or a skid loader, dig a trench about 24" wide and deep enough to fit the required amount of buried block and compacted base. For walls 4' high and under, bury one course of units. For walls taller than 4', consult a qualified engineer for design information. Total wall height includes the height of any buried courses.

2 Firmly compact the soil in the bottom of the trench. Lay 6" of compactible base (sand and gravel) in the bottom of the trench and compact (Fig. A).

3 Place the first layer of Anchor units without lips on the prepared base (lips must be manually knocked off units before placement) (Fig. B). Position the units side by side in full contact with the base. Level in both directions using your carpenter's level. Backfill with free-draining aggregate.

4 Continue assembling additional courses by placing units in a staggered relationship to the course beneath (running bond), pulling each unit forward until secure (Fig. C). NOTE: Use gravel (free-draining aggregate) to backfill each additional course as it is installed.

5 Place drain tile behind the wall at grade to allow water to drain from the backfill (Fig. D). Outlet the drain tile through the wall at every low point or every 50' of wall length and around the ends of the wall. Backfill with free-draining gravel 12" behind the wall. Fill in the voids. Organic soil or clay-type soil is not recommended for backfill material.

6 Fill any remaining areas behind the wall with soil (Fig. E). Compact every 8". Repeat steps 4, 5, 6 until the wall reaches the desired height. For walls taller than 4', consult a qualified engineer for information concerning proper design, backfill and geosynthetic reinforcement.

7 Firmly compact native soil behind the wall (Fig. F). Do not compact directly on top of the units.

8 You may need partial blocks. To split a block, use a hammer and chisel to score the block on all sides. Pound the chisel on the score line until the block splits. If the block does not split easily, you may need to use a circular cut-off saw with a masonry blade. Read and understand the operating manual before using a saw. Always wear eye protection when splitting blocks.

Refer to the Estimating and Installation Manual for instructions on installing free standing walls and special applications. Copies available at authorized Eagle Bay dealers.
